

Make your own PAPER WISH

Follow these steps to make your own origami paper wish. Then tuck that wish into an envelope and send it to someone you miss. You will need a square piece of paper that is two different colors (you can color one side if needed), clear tape, an envelope, and a stamp.

1

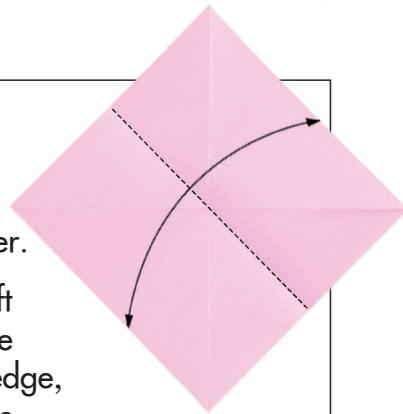

Start with the colored side of the paper down.

Fold the left point over to meet the right point, crease, and unfold.

Next, fold the bottom point up to meet the top point, crease, and unfold.

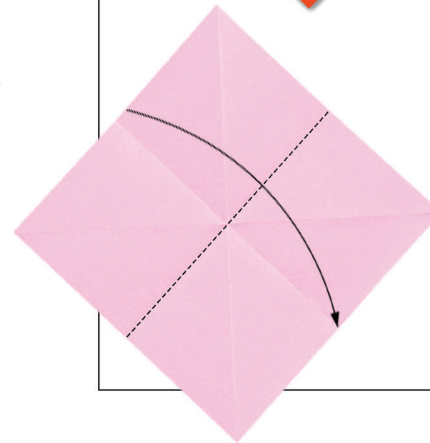

2

Turn the paper over.
Fold the bottom-left straight edge to the top-right straight edge, making a rectangle.
Crease and unfold.

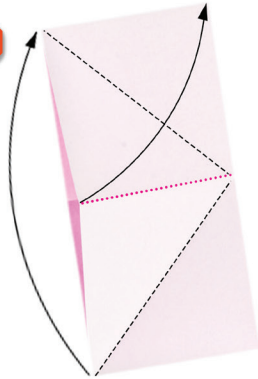

3

Fold the top-left straight edge to the bottom-right straight edge, making a rectangle.
Crease and keep folded.

4

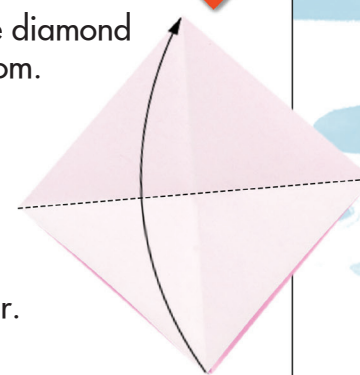

Turn your rectangle so the opening is on the left.

Take the top-left point and the bottom-left point and squish them together, making a 3D shape.

Then flatten the paper into a diamond.

5

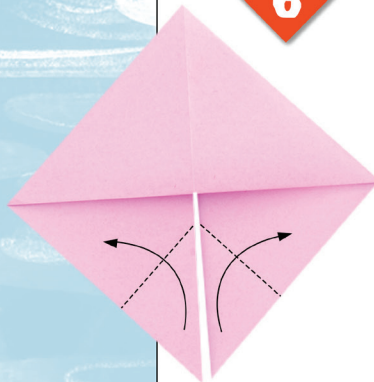

The open point of the diamond should be at the bottom.

Fold the top layer's bottom point so it meets the top point and crease.

Flip the diamond over. Repeat on the back.

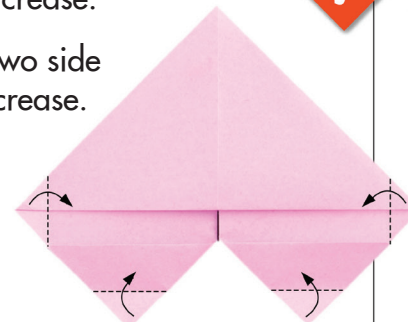

6

Fold the bottom points up and out so they meet the outside edges of the bottom half of the paper and crease.

There will be a small space between the center line and the new triangles.

7

Fold the two bottom points up and crease.

Then fold the two side points in and crease.

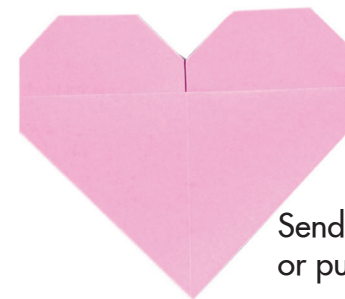

8

Tape the four points you just folded.

Then flip your heart over.

9

Send the heart as is, or put a note inside your paper wish.
